

The Open Access Israeli Journal of Aquaculture – Bamidgeh

As from **January 2010** The Israeli Journal of Aquaculture - Bamidgeh (IJA) will be published exclusively as **an on-line Open Access (OA)** quarterly accessible by all AquacultureHub (<http://www.aquaculturehub.org>) members and registered individuals and institutions. Please visit our website (<http://siamb.org.il>) for free registration form, further information and instructions.

This transformation from a subscription printed version to an on-line OA journal, aims at supporting the concept that scientific peer-reviewed publications should be made available to all, including those with limited resources. The OA IJA does not enforce author or subscription fees and will endeavor to obtain alternative sources of income to support this policy for as long as possible.

In Memoriam
Professor Boaz Moav
(1938-2002)

On January 28, 2002, Professor Boaz Moav passed away after a long and valiant struggle with his ailment. We have lost both a good friend and a dedicated scientist who contributed greatly to the scientific aspects of fish culture.

Boaz studied microbiology at Tel Aviv University (B.Sc. and M.Sc.) and at the University of Pennsylvania (Ph.D.), where he continued his training in immunology. Upon his return to Israel and his first academic appointment as a lecturer in the Zoology Department of Tel Aviv University, Boaz became interested in the chromatin of fish sperm during maturation, and he and his students studied the biosynthetic patterns of developmental histones in tilapia species.

It was then that he began his cooperation with aquaculturists and aquaculture scientists studying chromosome set manipulation, especially in tilapia. During his last decade, he was engaged in investigating the expression and inheritance of exogenous genes (such as GH) in transgenic fish.

His vast knowledge of biology and his inquiring and critical mind were invaluable to the work of evaluating committees on which he served and contributed significantly to improving the scientific quality of aquaculture research in Israel.

In addition to his academic activities, Boaz was involved in public and community work on a national scale. He was an unyielding fighter for human and civil rights. He served four years as a Member of Knesset (the Israeli Parliament), representing a civil rights party. In his public activities he advanced a variety of environmental and civil issues, devoting his time, optimism and boundless energy into these activities just as he did into science and everything else he touched.

With the death of Professor Boaz Moav, Israeli aquaculture will surely miss his guidance and always good-humored constructive criticism; his colleagues at the university have lost a good friend and truly wise advisor.
